

Sr.	Unit	Question	CO
1	1	Explain features of python programming language.	CO1
2	1	Explain Indention in python with example.	
3	1	Explain input() and print() function with example.	
4	1	State and explain various datatypes available in Python.	
5	1	List out the naming convention for python variable names.	
6	1	Discuss different types of comments in Python.	
7	1	List and explain Tokens available in Python with suitable example.	
8	1	Is String Mutable in python ? Explain String Handling methods with example.	
9	1	Explain String Slicing With example.	
10	1	Explain List Comprehension with example.	
11	1	Differentiate List, Set, Tuple and Dictionary.	
12	1	Explain List methods with example.	
13	2	List and explain types of Operators available in Python.	CO2
14	2	Explain Membership operator with example.	
15	2	Explain Identity operator with example.	
16	2	Explain branching statement with example.	
17	2	Explain looping statement with example.	
18	2	Explain for loop with else statement.	
19	2	Explain range() function with example.	
20	2	Explain tuple unpacking with example.	
21	2	Explain break, continue and pass keywords with example.	
22	2	Explain types of function arguments with suitable example of each type.	
23	2	Discuss the concept of calling Function by object reference in Python.	
24	2	Explain scope of a variable with example.	
25	2	Explain lambda function with example.	
26	2	State the properties of recursion and explain recursion with example.	
27	2	Explain map, filter and reduce with example.	
28	3	Explain read(), readline() and readlines() with example.	CO3
29	3	Explain tell(), seek(), write() and writelines() with example.	
30	3	Explain open() with all file access modes with example.	
31	3	What is Exception ? Explain Exception handling with example.	
32	3	Explain built in Exception of Python.	
33	3	Explain try, except and else keywords with example.	
34	3	Explain finally keyword with example.	
35	3	Explain Exception's arguments with example.	
36	3	Explain how to handle multiple exceptions.	
37	3	Write a detailed note on User Defined Exception.	
38	4	What is Module? Discuss the different ways to import Module.	CO4
39	4	How to create the custom Module in Python?	
40	4	What is random Module? State and explain various functions of random module with suitable example of each.	
41	4	State and explain the use of various functions of math Module.	
42	4	Write a brief note on datetime Module.	
43	4	What is Package? How to create the custom Package in Python?	

44	4	What is matplotlib? Explain plot() with example.	
45	4	Explain Axis, Ticks and Grid in matplotlib.	
46	4	Explain Line Appearance in matplotlib.	
47	4	How to export graph in matplotlib?	
48	4	Explain Labels, Annotation and Legends in matplotlib.	
49	4	Explain pie chart with suitable example.	
50	4	Explain bar chart with suitable example.	
51	4	Explain Histograms with suitable example.	
52	4	Explain Boxplots and Scatter Plot with suitable example.	
53	5	Define : class and object	CO5
54	5	Explain self parameter with an example.	
55	5	Write a detailed note on __init__ method of Python.	
56	5	Differentiate between class attribute and instance attribute.	
57	5	Discuss the build in class attributes with suitable example.	
58	5	Explain with an example how to declare and access public, protected, and private variables/methods in Python.	
59	5	List the different types of access modifiers in Python and describe their differences.	
60	5	What are the different types of methods in Python classes? Explain each with an example.	
61	5	Differentiate between instance methods, class methods, and static methods in Python.	
62	5	Why do we use @classmethod and @staticmethod decorators in Python?	
63	5	Explain how an instance method is different from a class method. Provide a Python example to illustrate.	
64	5	What is inheritance in Python? Explain its importance in object-oriented programming.	
65	5	List and describe the different types of inheritance in Python with examples.	
66	5	How does method overriding work in inheritance? Write a Python example to illustrate method overriding.	
67	5	What will happen if a child class defines a method with the same name as a method in the parent class? Explain with an example.	
68	5	Explain the use of super() with example.	
69	5	Why doesn't Python support traditional method overloading like other programming languages? How can you achieve similar functionality in Python?	
70	5	Differentiate between method overloading and method overriding in Python.	
71	5	Write a Python program to create two classes with the same method name but different implementations. Then, write a function that calls the method on objects of both classes to demonstrate polymorphism.	
72	5	What is an abstract class in Python? Why do we use it?	
73	5	How do abstract classes differ from regular classes in Python?	
74	5	Explain the role of the ABC module and the @abstractmethod decorator in defining abstract classes in Python.	
75	5	What happens if a subclass does not implement all abstract methods of its parent abstract class? Explain with an example.
